

Ye Olde Guide to Email Security

Welcome to the Kingdom of Email Security!

Just like a well-defended castle, strong email security relies on layers of protection. In this infographic, discover how each part of your security stack plays a role in defending the kingdom from modern-day threats like phishing, malware, and data loss.

Roaming Guards

Patrolling the castle grounds day and night, the Roaming Guards are your Managed Detection and Response (MDR) solution. These vigilant defenders monitor the kingdom's endpoints and servers hunting for suspicious activity and responding swiftly to threats before they can breach the gates.

Magic Gatekeeper

At the castle's main gate stands the Magic Gatekeeper—an enchanted guardian who inspects every scroll and visitor before they cross the drawbridge. This is your Email Gateway Security, the first line of defense that scans incoming and outgoing messages for hidden curses (malware), forged seals (phishing), and suspicious intent. With powerful detection spells, it ensures only safe, trusted messages make it into the kingdom.

Tower Guards

High atop the castle walls, the Tower Guards keep constant watch over the kingdom. These sentinels represent your SIEM for Microsoft 365, scanning the horizon and the inner courtyard for signs of trouble. With a 360-degree view, they detect suspicious activity, raise alarms, and help coordinate a swift response to threats. Whether it's a lone intruder or a coordinated siege, the Tower Guards ensure nothing goes unnoticed.

Knight School

Even the strongest castle needs sharp-eyed citizens. End User Awareness Training equips your users to spot imposters, avoid traps, and defend the realm from phishing and deception—turning everyday users into frontline defenders.

Castle Crisis

Every kingdom fears the dragon—a rare but devastating force that can lay waste to even the most fortified castle. In the realm of email security, this dragon symbolizes catastrophic events that disrupt operations, like data corruption, system failures or natural disasters. When the flames hit, even the strongest defenses may falter. But fear not...

Wizard's Spellbook

All is not lost! Hidden deep in the castle's vault lies the wizard's spellbook—a powerful backup solution that can turn back time after disaster strikes. With Microsoft 365 backups, your kingdom can rise from the ashes, restoring lost data and rebuilding what was destroyed. It's your ultimate failsafe when all else has fallen.

Is Your Castle Secure?

Even the most majestic castle needs the right allies. As a trusted Managed Services Provider, we help fortify your digital kingdom with everything from proactive security and 24/7 monitoring to strategic projects, procurement, and licensing. Whether you're building your defenses or recovering from a siege, we're here to help you protect what matters most.
